

Defoamer XD Defoamer

Defoamer XD is a cost effective, wide spectrum defoamer for aqueous fluids. It readily disperses in water and brine and is thermally, oxidatively, and hydrolytically stable at high temperatures and all pH. It rapidly knocks down foam caused by any foaming agent or surfactant.

Defoamer XD can be used to prevent or eliminate foam in many applications, including:

- Recycled water in drilling operations
- Backyard operations
- Gas cut drilling mud
- Excess foam returns during air drilling
- Other water treatment systems

Defoamer XD has the following features and benefits:

- Dilutable in water, for ease of application
- Works on detergents, cleaners, foamers, for industrial use
- Nonflammable, for storage and handling safety
- Stable to thermal, oxidative, and hydrolytic breakdown, to keep working
- Readily dispersible and spreadable in water, for fast response
- Ultimately adsorbed to oil and solids, to prevent recycling to water
