

# WATER BOY™

Real-Time Water Intelligence for Drillout Operations

## Where It Fits:

- > Installed inline between working water and frac pump
  - Provides continuous, real-time feedback before fluid hits the wellbore

## What It Measures (Live)

pH TDS Viscosity Density Temperature

No lag. No lab samples. No guesswork.

## Integrated Automation Advantage:

- Directly integrates with Chem Shot™
  - Closed-loop chemical control based on real-time water quality

Frac Pump

## Why It Matters

- > Dial in FR in real-time
  - Optimize chemical application based on actual water conditions
- > Reduce chemical spend
  - Eliminate over-treatment & wasted product
- > Maintain hole cleaning performance
  - Consistent fluid properties = consistent execution
- > Know exactly when to swap water systems
  - Data-driven decisions, not assumptions

Stop treating water blindly.
